ANNOUNCING OIS PAPERLESS

High-Tech Solution for Ambulatory Pumps Saves Oncology Nurses and Staff Time

ATLANTA – August 26, 2010 - Outpatient Infusion Systems (OIS), a national ambulatory pump provider serving oncology clinics across the U.S., announces the availability of the industry's first paperless system, **OIS Paperless**.

OIS Paperless eliminates all paper-based forms required by other ambulatory pump billing companies, saving staff time and streamlining processes.

"We estimate our technology solution saves nurses or pharmacy technicians approximately 50 to 75% of the time required to administer traditional paper-based pump programs," said OIS Director of Clinical Services Greta Dudley, RN, OCN. "This time savings is significant and realized almost immediately by the practice because of the user-friendly nature of the system."

Through the proprietary web-based OIS Paperless system, all information is captured digitally, including patient demographic info, insurance information, patient's assignment of benefits, prescription for ambulatory pump and patient and doctor signatures.

“The system provides a central depository for all information related to pumps,” explained Greta. “Rather than information residing in multiple locations--in a patient chart, on a doctor’s desk awaiting signature, or perhaps at a different office entirely--it’s centralized and accessible online by authorized users of the system.”

Different configurations of OIS Paperless—including a wireless, tablet PC--are available depending on the size and needs of the practice.

OIS Paperless integrates with leading EMR systems, providing additional time savings in terms of capturing patient information.

“We look forward to partnering with oncology clinics in their electronic conversion efforts,” said Greta. “We have created a system that integrates the management of the ambulatory pump program seamlessly into the day-to-day operation of the clinic.”

Ambulatory pumps are often used in oncology clinics to treat patients with colorectal cancer. The patient visits the clinic for the start of therapy where they are connected to an ambulatory pump; the patient then returns home for the remainder of the infusion (12 to 48 hours, depending on protocol), and back to the clinic to be disconnected or for refill.

About Outpatient Infusion Systems:

Outpatient Infusion Systems (OIS) is an accredited ambulatory pump provider serving the oncology marketplace. Working in partnership with cancer clinics across the U.S., OIS helps practices improve clinical outcomes for patients on ambulatory infusion and streamline processes and workflow within the clinic. OIS is headquartered in Alpharetta, GA and is a wholly-owned subsidiary of Medical Specialties Distributors (MSD), LLC. MSD is the primary distributor of med surg products and biomedical equipment into the alternate site infusion marketplace. MSD’s additional services include formulary development, online ordering, equipment management and tracking, and patient direct delivery programs. For more information, visit: www.ois-inc.net, www.oispaperless.com or www.msdonline.com or call: 1.888.640.2704.
