Points to Practice

**ACCESS**

**Syringe:**
- Access the BD Q-Syte device with an ISO Luer lock or Luer slip syringe.
- Connect using a straight-on approach.
- Disconnect using a straight-off approach.

**Administration Set:**
- When using an administration set with a spin nut, insert the slip luer into the BD Q-Syte device using a straight-on approach. Then secure the connection with the spin nut.
- When disconnecting an administration set with a spin nut, unscrew the spin nut and remove the Luer slip with a straight-off approach.

**Blood Withdrawal:**
- Use ISO syringe or BD Luer-Lok™ access device.

**DISINFECT**

- Disinfect the silicone septum with an appropriate antiseptic agent.
- Disinfect prior to each access.

**FLUSH**

- Flush according to facility policy or until device is clear. If unable to clear, replacement is recommended.
- To minimize reflux of blood into the vascular access device, it is recommended to clamp before disconnecting.
- To disconnect, hold the BD Q-Syte device firmly in place to prevent accidental removal and remove using a straight-off approach.

**Note:** Do not use needles or blunt cannulae with the BD Q-Syte device.

**Highly Elastic Septum**

- The BD Q-Syte device has a unique Luer penetrating septum design that provides higher flow rates, fluid path visualization, and consistent dependable performance.
- Non-tortuous and unrestricted fluid path

**Clear Housing**

**Helping all people live healthy lives**

NOTE: Refer to package insert for precautions and complete instructions for use.
